4. Standardization

Research used to focussed in a small number of samples and researchers analysed them with the whatever means they had and/or felt more comfortable with:

- Windows based PC using programs with visual interface
- Macs and Linux based workstations
- Remote web servers
- Web-based platforms (i.e. Galaxy) and remote HPC
- HPC local environments

GOBIERNO
DE ESPAÑA

MINISTERIO
DE CIENCIA, INNOVACIÓN
Y UNIVERSIDADES

Instituto
de Salud
Carlos III

4. Standardization

- Windows based PC using programs with visual interface

Pros	Cons
Data remains private	No backups or data management schemes
Software easy to install	Software version not easy to control, binaries are black boxes
Graphic interface	No control over hidden parameters
	Analysis are irreproducible

GOBIERNO
DE ESPAÑA

MINISTERIO
DE CIENCIA, INNOVACIÓN
Y UNIVERSIDADES

4. Standardization

- Macs and Linux based workstations

Pros	Cons
Data remains private	No backups or data management schemes
Control over software installed versions, open source programs	Software may not be easy to install, library and dependencies problems
All parameters are available for the command	Command line interface
	Analysis are irreproducible

GOBIERNO
DE ESPAÑA

MINISTERIO
DE CIENCIA, INNOVACIÓN
Y UNIVERSIDADES

Instituto
de Salud
Carlos III

4. Standardization

- Remote web servers

Pros	Cons
No need to storage intermediate files	Your data is in someone else's computer No backups or data management schemes
No need to install software	Software version not easy to control, black boxes
Graphic interface	No control over hidden parameters
	Quotas Analysis are irreproducible

4. Standardization

- Web-based platforms (i.e. Galaxy) and remote HPC

Pros	Cons
No need to storage intermediate files	Your data is in someone else's computer No backups or data management schemes
No need to install software Partial control over installed software	No control over installed software, versions and future availability
Graphic interface	No control over hidden parameters
Analysis are partially reproducible	Quotas

GOBIERNO
DE ESPAÑA

MINISTERIO
DE CIENCIA, INNOVACIÓN
Y UNIVERSIDADES

4. Standardization

- HPC local environments

Pros	Cons
Data remains private Backups and data management schemes	Quotas
No need to install software Partial control over installed software	No control over installed software, versions and future availability
All parameters are available for the command	Command line interface
Possibility of suggesting new software installations	Analysis may be irreproducible

4. Standardization

HAVE YOU FAILED TO REPRODUCE AN EXPERIMENT?

Most scientists have experienced failure to reproduce results.

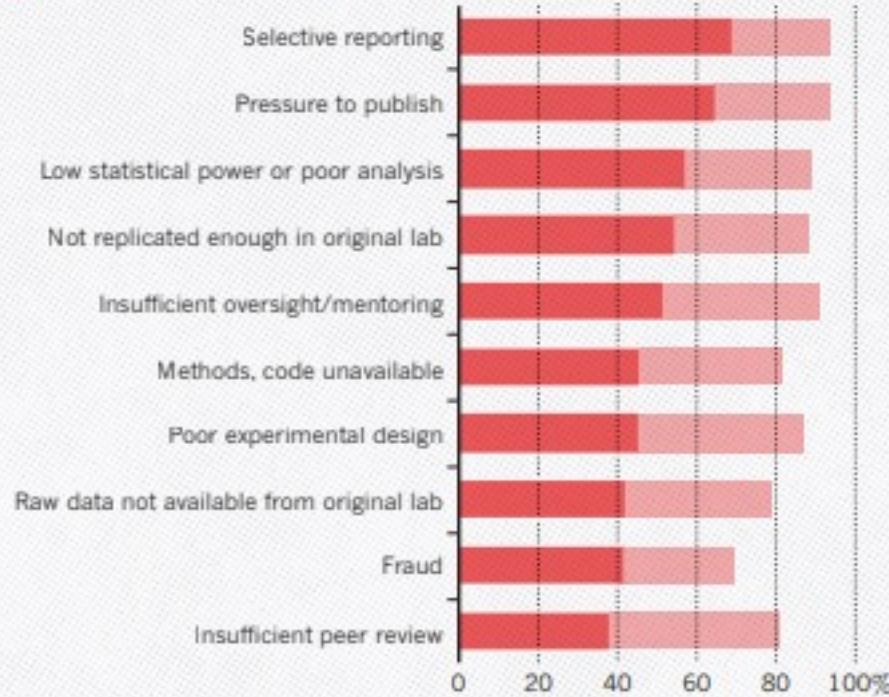

- Someone else's ● My own

WHAT FACTORS CONTRIBUTE TO IRREPRODUCIBLE RESEARCH?

Many top-rated factors relate to intense competition and time pressure.

- Always/often contribute ● Sometimes contribute

4. Standardization

1 sample

Research only: NGS was still a new thing, no applications 10 years ago

Reproducibility is not needed: Why would anyone reanalyse this?

Storage is not an issue: files of 1 sample fits everywhere in my HDD, maybe I will copy it in a CD-ROM

Computing is simple: no need to worry about resources or optimisation

multiple samples

Many applications: research, clinical, industrial, forensic, military, ...

Reproducibility, scalability , portability and standardisation are required

Storage is challenging: storage, indexation and backup required, privacy and legal standards

Computing requires optimisation and lots of resources

GOBIERNO
DE ESPAÑA

MINISTERIO
DE CIENCIA, INNOVACIÓN
Y UNIVERSIDADES

4. Standardization

- Nowadays scientific computing paradigm

Pros	Cons
Data remains private Backups and data management schemes	High storage space Dedicated file systems Databases to index files
Control over software installed versions, open source programs	Many versions of the same software coexists
All parameters are available for the command	You have to understand all software variations
Analysis are reproducible and public	You have to publish and document your work

4. Standardization

SYSTEM HIGHLIGHTS

The system will focus on features relevant to genomics researchers with features such as huge data storage capabilities, very high-memory research servers for maximum performance and integration with relevant biological databases.

7680 vCPU Cores

The CLIMB system is composed of over 7,500 CPU cores of processing power. This makes it the largest single system dedicated to Microbial Bioinformatics research, anywhere in the world.

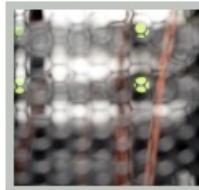

500 Local Storage (TB)

To provide users with local, high performance, storage we have deployed IBM GPFS in each of the 4 sites, to provide 500TB of local storage. This storage is connected to our servers using Infiniband.

78 Total RAM (TB)

Unlike most supercomputers, the CLIMB system has been designed to provide large amounts of RAM, in order to meet the challenge of processing large, rich biological datasets. In comparison, the Spruce B supercomputer at the Atomic Weapons Research Establishment (number 68 on the Top 500 Supercomputers list, November 2014) has 35,000 cores, but only has 110 TB of RAM.

1000 Virtual Machines

The CLIMB system is not designed to provide a single HPC system, as is often the case within academic computing; rather, the CLIMB system provides a pool of CPU cores and RAM that Medical Microbial Bioinformatics researchers can gain access to. The system has been designed to support over 1,000 VMs running simultaneously, potentially supporting most of the Microbial Bioinformatics community within the UK.

Workflows I

- Bioinformatic analyses invariably involve shepherding files through a series of transformations, called a pipeline or a workflow.
- These transformations are done by executable command line software written for Unix-compatible operating systems.
- They need to be reproducible, easy to maintain, portable and scalable.

Workflows II

5. Nextflow

<https://www.nextflow.io/>

Sequencing used in clinical diagnosis, workflows have to assure:

- Reproducibility
- Portability: different platforms
- Scalability: different numbers of samples

¿Questions?

Thanks to all my colleges in BU-ISCII

Thanks to Genomics Unit and the
Reference Laboratory in Respiratory
Viruses

Sara Monzón
Luis Chapado
Erika Kvalem
Alberto Lema
Isabel Cuesta

(Find us in <https://github.com/BU-ISCIII>)

And special thanks to the nf-core community (<https://nf-co.re/>)

Harshil Patel

(<https://github.com/drpatelh>)

Bioinformatics & Biostatistics Group at The Francis Crick Institute, London, now in
Seqera Labs
